

## Using Xbox, PlayStation and fire sticks to access Seesaw and remote learning

### Xbox

1. Plug a key board into the XBox USB slot
2. Go into my games and apps
3. Find Microsoft Edge and select
4. Type in: <https://app.seesaw.me/#/login> and log in as you would in school
5. You can then access your work
6. To move around you can use the Xbox controller or plug in a mouse

### PlayStation

1. Identify the PlayStation internet browser icon (it is WWW with dots around it)
2. Press the PS4 Logo on the Controller
3. Go into applications and you will find the internet browser
4. Type in: <https://app.seesaw.me/#/login> and log in as you would in school
5. You can then access your work
6. To move around you can use the PlayStation controller or plug in a mouse

### How to access the internet on a fire stick.

There are multiple ways to install Google Play on the Fire HD 10 tablet. If you have a Windows 10 PC, I recommend using a free program called Fire Toolbox that allows you to install the Play Store and make many other changes to Amazon tablets.

If you do not have a Windows computer and/or prefer a different method, there are a few other methods that will work, and I'll describe them below.

So here are the steps for installing Google Play on the Fire HD 10:

1. Using a Windows PC, download and install the latest version of Fire Toolbox using the [link from the xda-developers forum](#).

2. On your tablet, open the Settings app (either by tapping the Settings icon on the home screen or by pulling down the Quick Settings panel and tapping the Settings icon).
3. Scroll down to Device Options and tap it.
4. Tap the Serial number 7 times until you see a notice saying that you're a developer.
5. Tap the back button to return to the previous screen.
6. Select the newly appeared "Developer Options."
7. Slide the toggle to enable Developer Options.
8. Scroll down until you see "USB Debugging" and slide the toggle to enable that.
9. Plug your tablet into your Windows PC using a USB cable (the charging cable that came with the tablet should be fine).
10. Run the Fire Toolbox application on your PC.
11. Tap OK on the box that appears on the tablet.
12. Wait a moment and/or follow any instructions on the screen as Fire Toolbox detects your device.
13. Click the box that says "Google Services."
14. Read the instructions and then click "yes."

That's pretty much all there is to it — and I know it looks like a long list, but steps 2 through 8 are really just about setting up developers options on your tablet.
